

ABSTRACT OF THE DISCLOSURE

A stand mixer chute assembly is provided for introducing food ingredients into a bowl on a stand mixer. The chute assembly includes a body adapted to hold food ingredients and a leg to support the body on a countertop or table. The front edge of the
5 body rests upon the upper perimeter edge of the bowl and into the bowl so that food ingredients may be fed into the bowl during operation of the stand mixer. A secondary body may be provided to matingly nest within the first body so that dry and liquid ingredients may be fed into the bowl using different chute bodies.
